

Altis Life – Framework – Welcome

Welcome to the installation guide for the basic Maverick Applications framework. The framework is built for Altis Life 3.x - 5.x. and is required for the Maverick Applications scripts to work correctly. Please follow the instructions closely to avoid errors while installing the framework. Installing this framework base is only necessary once per missionfile.

Altis Life – Framework – Installation

Step 1

Open your Altis Life missionfile. Your missionfile folder will be represented as <missionfile> in this manual.

Step 2

Copy the enclosed folder "maverick" into "<missionfile>\". The folder "maverick" should now be inside your missionfile folder "<missionfile>\maverick".

Step 3

Open "<missionfile>\description.ext" and add the following code at the very bottom of the file

```
#include "maverick\maverick_master.cpp"
```

Step 4

Open "<missionfile>\description.ext" and add the following code

```
#include "maverick\maverick_functions_master.cpp"
```

below the line

```
class CfgFunctions {
```

You can now save and close this file.

Step 5

This step is only necessary if you are using Altis/Tanoa Life 3 or higher

Open "<missionfile>\CfgRemoteExec.hpp" and add the following code

```
#include "maverick\maverick_remoteExec_master.cpp"
```

below the first instance of

```
jip = 0;
```

Also change

```
jip = 0;
```

to

```
jip = 1;
```

You can now save and close this file.

Installation complete

You are now able to use all scripts provided by Maverick Applications. Have fun!
